Lincoln School

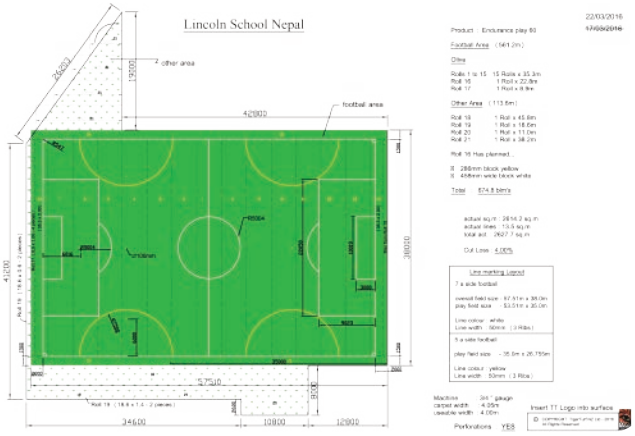
Kathmandu, Nepal

Full design, construct and build of football field

Date of Project Completion: October 2016

Surface/s: XP Pro 50

Base Construction: Dynamic base with sub-soil drainage



Established in 1954 in the Himalayan kingdom of Nepal, Lincoln School holds strong cultural heritage in its roots and at the same time, blends work and play in the most fun-learning environment.

The story began when the management of the school decided to upgrade the existing sports facility to an arena that gives the youngsters a safe environment and consistently high performance all year round, come snow or rain. After long hours of discussion, the management decided upon a highly durable long pile product designed for high usage field sports and naturally, Altius was the preferred partner for design, construct and build.

TigerTurf's Endurance range is manufactured from TenCate's unique XP Pro yarn – the only yarn in the world sold with an unlimited play durability warranty from the manufacturer offering unbeatable performance and unmatched durability. What's more, this yarn has an extended warranty against excessive fibre splitting, and is ideal for extensive use, while being safe at the same time.

Lincoln School now has a world-class surface with the best surfacing technology. It has set an example of continued innovation of sports surface systems. At Altius, we are committed to deliver top quality performance based synthetic turf that ensures long term playability for maximum return on investment.
